TRANSPORT HUMAN PRESCENCE ANYWHERE ON REAL TIME

Welcome to the new industrial age!

We are Inbiodroid, a Mexican technology startup focused on creating solutions in robotics for the industry; a group of visionaries with the mission of navigating through the challenges that the markets have not been able to overcome and apply exponential robotic technologies to conquer a new era of progress in humanity.

Our first challenge was to create the first avatar robot in Mexico:
PROMETHEUS

A humanoid robotic body capable of replicating the movements of its user anywhere in the world and in real time.

Discover the world of telepresence!

Everything that **PROMETHEUS** sees, hears and feels is transmitted to its operator through an immersive platform and an active communication interface, meanwhile the user transports its consciousness, abilities, movements and intentions to PROMETHEUS. For the first time in the history of humanity we will be able to break the barriers of space-time to transform the world.

PROMETHEUS is considered one of the most advanced immersive robotics and telepresence projects worldwide, it is the only Latin-American development among the 18 finalists of the largest robotics competition in history: **ANA Avatar XPRIZE.**

"The best way to predict the future is to invent it"
-Alan Kay

INDUSTRIAL APPLICATIONS

INDUSTRIAL SECURITY | AGRICULTURE | AEROSPACE TECHNOLOGY | HOSPITAL INDUSTRY | MINING | SEARCH AND RESCUE | MILITIA

We are living the beginning of a new industrial revolution and we want to take Mexico and the world through the threshold of new technologies, thanks to PROMETHEUS the industrial workforce will never be the same.

At Inbiodroid we seek to build a world in which the lives of workers are never risked again due to the demands of production and, at the same time, we understand how demanding the industry is. Thanks to avatar robots it is possible to save lives without stopping the production line.

The constant production to meet market demand, environmental and epidemiological challenges, technological progress and cultural changes in society are demanding that we respond with a new mentality, with solutions instead of explanations, with leadership, with a new more efficient and aware industry!

"WORK EVOLVED"

PROMETHEUS CAN:

WORK IN CONFINED SPACES
where workers have to deal with toxic gases, very high temperatures, submerged spaces, unbearable noise or high pressure.

PROVIDE PERSONALIZED AND SPECIALIZED CARE
Remotely and with absolute precision, taking the knowledge and skills of specialists anywhere in the world.

SPACE AND DEEP-SEA EXPLORATION
As it can be operated by anyone from any distance without being affected by radiation or pressure.

AVOID CATASTROPHES
By working in environments with unstable surfaces, very deep tunnels, war zones, and even in Earth's orbit.

RESCUE PEOPLE
Without risking more lives whether by defusing a bomb, negotiating hostages' lives or saving the victims of a natural disaster

VENTURE INTO METAMOBILITY
And generate hundreds of new jobs that today we cannot even imagine by breaking down the physical barriers that limit us.

"EXPLORE THE POSSIBILITIES OF TRUE TELEPRESENCE"

PROMETHEUS 2.0

CHANGING THE WORLD REQUIRES CONSTANT DEVELOPMENT.

Our first prototype was chosen as a finalist in the largest robotics competition in history, but our work cannot end there; the second version of PROMETHEUS is currently in development and will be the one to participate in the ANA AVATAR XPRIZE finals.

PROMETHEUS is a multipurpose avatar robot built under a philosophy of safety and collaboration; in the future, more versions of PROMETHEUS will be developed with specific applications for each industry, our next step is always specialization.

Unlike the first version that was controlled by motion capture (mocap), whoever operates

PROMETHEUS 2.0 will use a control exoskeleton-suit that will have haptic gloves, a virtual reality visor with a speedometer and an omnidirectional treadmill that ensures a hundred of times faster response with more accurate data.

The second version is much more agile and robust, has greater freedom of movement, it is lighter and taller, in general, it's a much more efficient machine but we not only focused on improving its general characteristics, we also worked on a new design.

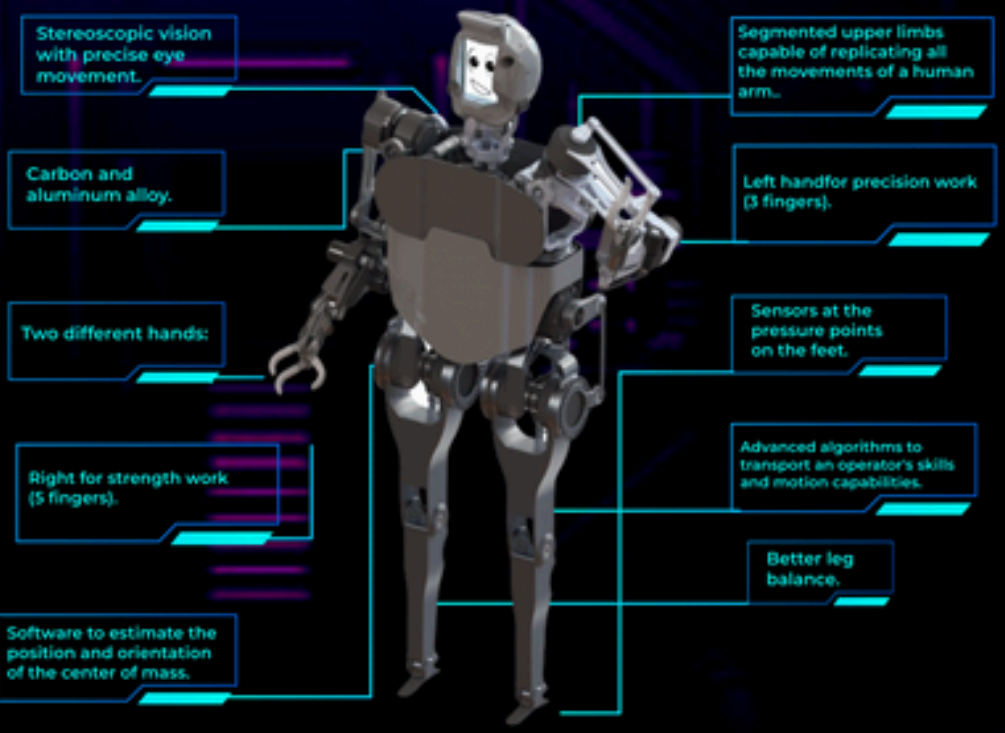

Incorporated Facebuilder

Operation suit

Improved immersion system

The future of the project will be written continuously at every step. We expect that PROMETHEUS 2.0 will be capable of performing acrobatics and reach its maximum performance at the end of 2024; in mid-2025, human interaction tests will conclude and, by the end of the same year, it will become a product for sale on the market.

AND AFTER THAT?

PROMETHEUS 3.0!

FINANCING A NEW INDUSTRIAL ERA

Ambitious projects require ambitious investments.

We are experiencing the beginning of an ideological and instrumental change in society and only those who are capable of adapting and joining the wave of ideas that has been growing year after year will be able to be part of the **industrial evolution.**

We offer investors, sponsors and collaborators of Inbiodroid the opportunity to shape the world of tomorrow to build a cleaner, safer and more efficient future for all.

We are looking for **high-level negotiations**, we have **sponsorship plans** ready for the industrial market, a new external communication campaign for large-scale lead generation is about to start and the **new stages of development** are being managed.

As **the only technology start-up in Latin America with the necessary capacity, research and development to create avatar robots,** we offer an extremely important competitive advantage: we do not depend on anyone, we can easily move where investors lead us and, of course, create **specific applications for any industry.**

We have already shown that we are a highly competitive team worldwide, beating teams with 5 times more time and 20 times more budget in the semifinals of ANA Avatar XPRIZE, we are the only commercial partner that can make **custom technological developments in much less time and with less investment.**

PLEASE FOLLOW US, SUPPORT US AND WITNESS HUMAN EVOLUTION AT

ANA AVATAR XPRIZE

THIS NOVEMBER 4TH AND 5TH!
